2026-08-30

60 / 100

DO NOT LAUNCH

Executive summary

The catalog, product detail, cart, and dummy checkout work in Chromium desktop and mobile. Launch should not proceed with the declared cross-browser scope because Firefox and WebKit discard shipping-address input and block the critical checkout flow. The page also lacks a main landmark.

Launch readiness score

Category	Weight	Status	Earned	Rationale
core-flows	40	WARNING	20	Catalog, product, and cart flows pass, while checkout succeeds only in Chromium and fails in Firefox and WebKit.
reliability-error-handling	20	WARNING	10	Empty-cart protection and published positive data behave consistently in Chromium, but cross-browser address entry is unreliable.
ux-content	15	PASS	15	Product discovery, labels, progression, and successful Chromium confirmation are understandable.
responsive	10	PASS	10	The 390x844 Chromium journey completes without horizontal overflow after opening the responsive search menu.
accessibility-smoke	10	FAIL	0	The page has a meaningful H1 and image alternatives but exposes no main landmark.
network-health	5	PASS	5	Verified runs recorded no unexpected first-party console errors or failed requests.

Critical flows

ID	Flow	Status	Evidence
CATALOG-001	Shopper can discover products	PASS	Search, sort, result count, and pagination passed in Chromium desktop; catalog smoke passed across the matrix.
PRODUCT-001	Shopper can review product details	PASS	Wireless Mouse detail exposed its description, price, and add-to-cart action.
CART-001	Shopper can manage the cart	PASS	Quantity count, removal, and empty-cart checkout protection passed.
CHECKOUT-001	Shopper can complete the demo checkout	FAIL	Chromium desktop/mobile completed, but Firefox and WebKit could not retain address input or reach payment.
RESPONSIVE-001	Critical shopping controls remain usable on mobile	PASS	Mobile Chromium catalog, responsive controls, and dummy checkout passed at 390x844.

Verified readiness findings

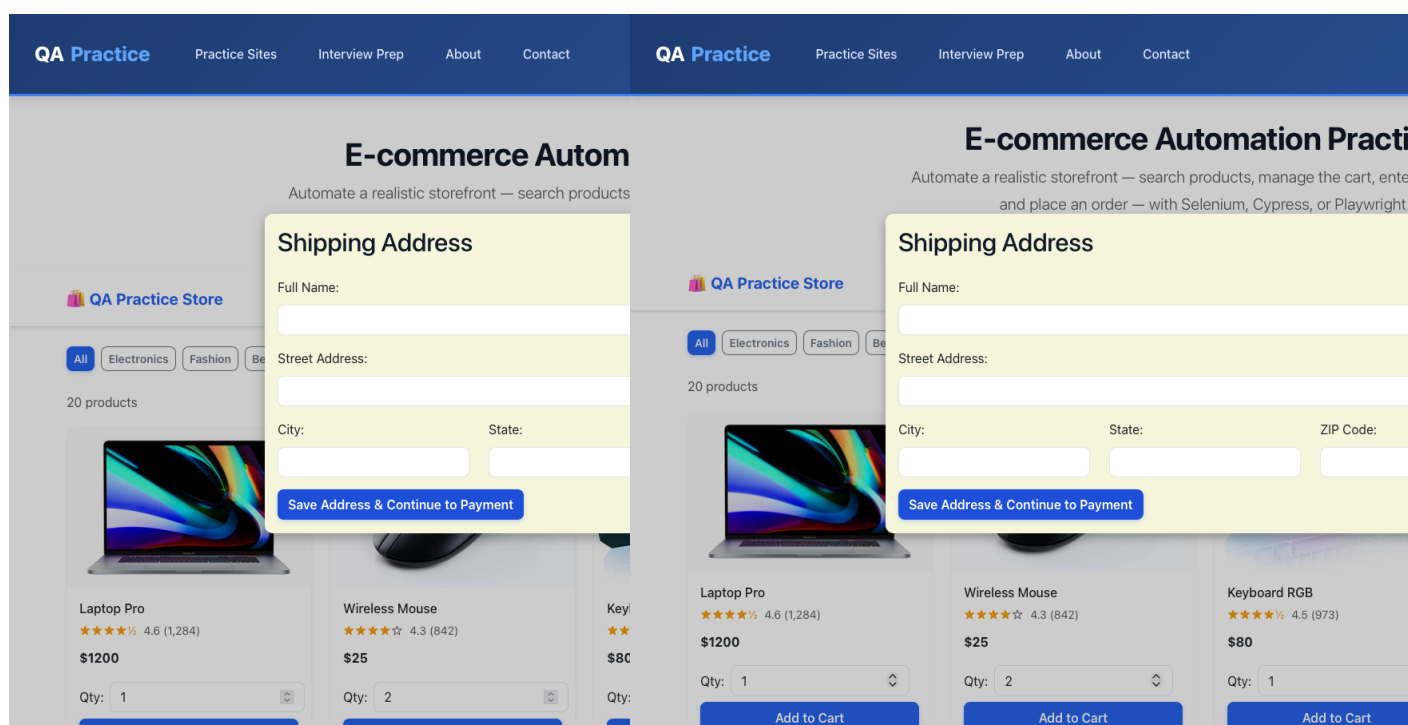

Major

QP-COMPAT-001 · Shipping address input is unusable in Firefox and WebKit

Environment	public-training-demo
Browser / device	Firefox and WebKit desktop 1440x900
Expected	Address fields retain typed values and the payment form opens.
Actual	Every address field immediately returns to an empty value in Firefox and WebKit, so the modal remains on shipping and checkout cannot complete. WebKit also renders several fields at severely reduced widths.
Recommendation	Verify the controlled-input event handling and responsive form styles in Firefox/WebKit, then add a cross-browser checkout regression test.

Reproduction

1. Add two Wireless Mouse units to the cart.
2. Proceed to the shipping-address step.
3. Enter the published dummy name, street, city, state, and ZIP values.
4. Attempt to save the address and continue to payment.

Minor

QP-A11Y-001 · Primary e-commerce content has no main landmark

Environment	public-training-demo
Browser / device	Chromium desktop 1440x900
Expected	The primary storefront content is contained by exactly one main landmark.
Actual	The document contains a visible H1 but no main element or equivalent main landmark.
Recommendation	Wrap the page's primary e-commerce content in a main element while keeping the existing level-one heading.

Reproduction

1. Open the e-commerce practice page.
2. Inspect the document landmarks and heading structure.

Evidence: artifacts/runs/20260830T072856Z-qa-practice-store-desktop-chromium/test-results/tests-qappractice-test-accessibility-responsive-py-test-catalog-has-basic-semantic-landmarks-chromium/trace.zip

Browser and device coverage

Profile	Browser	Device	Suite	Result
desktop-chromium	Chromium	Desktop 1440x900	full	8 passed, 1 accessibility failure
mobile-chromium	Chromium	Mobile 390x844	critical smoke and responsive	3 passed
desktop-firefox	Firefox	Desktop 1440x900	critical smoke	2 passed, 1 checkout failure
desktop-webkit	WebKit	Desktop 1440x900	critical smoke	2 passed, 1 checkout failure

Network and console observations

- Third-party advertising domains were separated from first-party product health observations.

Limitations

- This is a public training sandbox evaluated as a simulated customer engagement.
- Full manual keyboard coverage and exhaustive negative validation were not completed.
- Accessibility coverage is semantic smoke testing, not a WCAG conformance audit.
- Security, load, backend API contract, real payment, and assistive-technology testing are outside scope.
